                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated polypeptide comprising a 277, 480 583, 581, 628, 424, 638, 229, 310, 841, 241, 369, 382, 185, 586, 1026, 844, 782, 262, 394, 411, 485, 286, 333, 495, 350, 619, 490, 462, 255, 784, 252, 593, 472, 607, 781, 640, 686 or 154 amino acid sequence as given in the specification. The polypeptides, modulators of the polypeptides and antibodies against the polypeptides are useful for treating diseases such as neurological and psychiatric diseases including Alzheimer's, parasupranuclear palsy, Huntington's disease, myotonic dystrophy, anorexia and depression; cardiovascular diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 MVLLLLVAIPLLVHSSRGPAHYEMLGRCRMVCDPH-GPRGPG----PD-GAPASVPPFPP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 male reproductive diseases including low testosterone and male infertility; and disease of pancreas including diabetic Ketoacidosis, Type 1 and 2 diabetes and obesity. The present sequence is a Polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                   Kabnick KS;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel polypeptides and polynucleotides useful as a vaccine for preventing and treating diseases associated the polypeptide, e.g. Alzheimer's disease, dyslipidemia, obesity, diabetes, infertility,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        17;

                                                                                                                                                                                                                                                                                                                                                                                                    vaccines for inducing immunolists response in a mammal, and in screening methods for detecting the effect of added compounds on the production of mRNA and polypeptide in cells. The polypeptides can be used as immunogens to produce antibodies immunospecific for the polypeptides, and to identify membrane-bound or soluble receptors. The polypeptides, may be used as diagnostic reagents, in chromosome localisation studies and in tissue expression studies. The present sequence represents the amino acid sequence of novel human secreted protein #6.

       and unipolar affective disorders, schizophrenia, olivopontocerebellar atrophy or Shy-Drager syndrome. The nucleotide sequences (or their complements) have various applications in the art of molecular biology, including uses as hybridisation probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. This sequence represents the human LP231 polypeptide of the invention.

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       125

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                             The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in game therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system autopathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the Activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               635

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous allocalised neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -----GEVGRRGKAGLRGPPGPPGPRGPPGEPGRPGPPGPPGP-GPGGVAPAAGYVP 108

                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral scherosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression,

```
The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/lnhibin activity and may be useful in the diagnosis and/or inflammation.

                                                                                                                                                                                                                                                                                                                                           production of other cytokines in other cell populations. The population of other cytokines in other cell populations. The polymerlectides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity infinibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.

The invention transes to 217 hover indian ovarian unitagens (ABP41228) and to cobhas encoding them (ABD64131-ABD65635), and also encompasses polypeptides 90% identical and polynucleotides 95% identical to the theoriton. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen polynucleotides against human ovarian antigens and the use of ovarian antigens prognosing or preventing various ovary and/or breast related disorders. Such conditions include ovarian cancer and breast cancer, and metastratic tunnours of ovarian or breast origin, reproductive system of isorders (e.g., infertinity, disorders of pregnancy, anovulation, polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine disorders, infertinity, disorders of pregnancy, anovulation.

CC shock syndrome, inflammatory conditions (e.g., mastitis, cophoritis and varianties), immune disorders (e.g., congenital and acquired thematory conditions (e.g., mastitis, sophoritis and toward inflammatory conditions (e.g., mastitis, sophoritis and unitary system disorders (e.g., congenital and acquired thematory disorders (e.g., anamia), cardiovascular disorders.

CC shock syndrome), inflammatory conditions (e.g., mastitis, system), conditions (e.g., anamia), cardiovascular disorders.

CS shock system disorders (e.g., anamia), cardiovascular disorders.

CC and unianzy system disorders. Ovarian antigen polypeptides and conditions of the polynucleotides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polynucleotides may also be used in screening for compounds which contentification of individuals and in forensic analysis, and the content esquence acts for gene therapy, chromosome mapping, in the citetine of individuals and in forensic analysis, and the printed sequence represents a human ovarian antigen of the invention.

CC sequence represents a human ovarian antigen of the invention.

CC sequence represents a human ovarian antigen of the invention at the va

ACRP30R1M is expressed primarily in the heart and may be useful for treating and preventing diseases such as cancers, inflammation, cell death, obesity, diabetes, heart disease and disorders associated with cell proliferation, immunity, energy metabolism and homeostasis. ACRP30R1m is a homolog of ACRP30 Addipocyte Complement-Related Protein of 30 kDa) and is also similar to members of the TNF superfamily.

-:- FUNCTION: IMPORTANT NEGATIVE REGULATOR IN HEMATOPOIESIS AND IMMUNE SYSTEMS; MAY BE INVOLVED IN ENDING INFLAMATORY RESPONSES THROUGH ITS INHIBITORY FUNCTIONS. INHIBITS ENDOTHELIAL NF-KAPPAB SIGNALING THROUGH A CAMP-DEPENDENT PATHWAY. INHIBITS TNF-ALPHA-INDUCED EXPRESSION OF ENDOTHELIAL ADHESTON MOLECULES. INVOLVED IN THE CONTROL OF FAT METABOLLSM AND INSULIN SENSITIVITY.
-:- SUBGELLULAR LOCATION: SECRETED IN PLASMA.
-:- SUBGELLULAR LOCATION: SECRETED IN PLASMA.
-:- DISEASE: Defects in ADMI are the cause of adiponectin deficiency, resulting in very low concentration of plasma adiponectin.

Sequence 2. Application US/09530423

Patent No. 6461821

GENERAL INFORMATION:
APPLICANT: Otsuar Pharmaceutical Co., Ltd.

TITLE OF INVENTION: Smooth muscle growth inhibitory composition, a

TITLE OF INVENTION: therefor

TITLE OF INVENTION: therefor

FILE REFERENCE: P98-51

CURRENT FILIAN APPLICATION NUMBER: US/09/530,423

CURRENT FILIAN DATE: 2000-05-01
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   43;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Note: 176-C1x may also be present
C; Comment: The first component of complement is a calcium-dependent complex of the three ivation of C1x (enzyme), C1s (proenzyme), and the other eight components of complement.
C; Comment: The C1q subcomponent is composed of nine subunits, six of which are disulfide (see PIR:CIHUQC) chain. Equimolar amounts of the A, B, and C chains are found after reductions:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A Map position: 1p36.3-1p34.1

C;Comment: The first component of complement is a calcium-dependent complex of the thivation of Clr (enzyme), Cls (proenzyme), and the other eight components of complement; c;Comment: The Clg subcomponent is composed of nine subunits, six of which are disulf (see PIR:CHHUQC) chain. Equimolar amounts of the A, B, and C chains are found after r
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               C.
